Java Class BMI App

This is a simple Java class that calculates the Body Mass Index (BMI) of a person. The class has a main method that reads the weight and height of a person from the console and calculates the BMI. The BMI is then printed to the console.

The other class: Pane is a simple class that creates a series of dialog boxes to read the weight and height of a person and then displays the BMI in a dialog box.
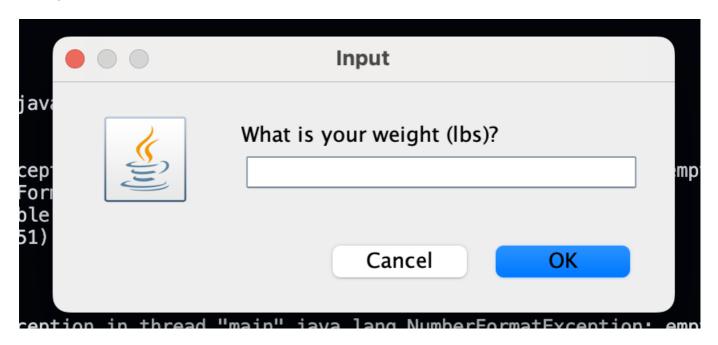

Running the App

```
jenv local 17 && \
./build.sh && \
java bmi.Pane
```

In Action

Console

Dialog

Input

What is your height in feet and inches (separated by a space)?

Cancel   OK

Message

Your BMI is: 23.49306102042812

OK
